

You can help break the chain of infection

Everyone has a role in stopping disease. If you follow these key infection control practices, you can stop the spread of germs and infection in early childhood education and care services.

Protect yourself and others

Get immunised, and make sure other staff and children are immunised

Sneeze or cough into your elbow or into a tissue, and teach children to do the same

Clean hands often, and especially

- before and after preparing food or eating
- after changing a nappy
- after going to the toilet
- after touching animals

Stay at home when you are sick, and send other staff and children home if they are sick

Keep wounds covered

Keep the environment clean

Immediately throw used tissues, nappies and wipes in the bin

Frequently clean bathrooms, kitchens and surfaces that are touched often

Clean the nappy change surface after every nappy change

Regularly wash soft materials on a hot setting, and dry completely

Immediately clean and disinfect areas that have been touched by body fluids

Keep food at the right temperature

Keep indoor areas well ventilated
